Server Rooms

The Rainford Solutions partitioning and security system offers operators of datacentres, co-location facilities and computer rooms, a high quality method of providing secure and private areas for individual end customers within a common room.

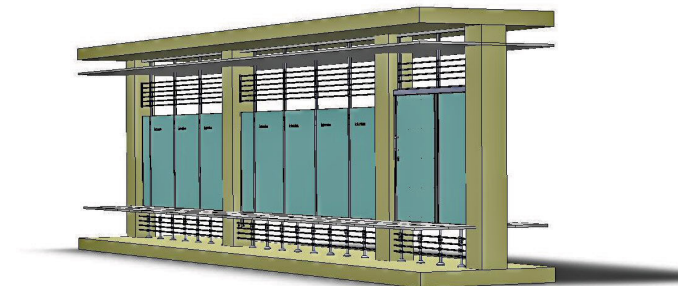

Designed and manufactured in our UK factory, the system provides both above and below floor security and is tailored to suit a particular customer's specific corporate and site requirements, from corporate colours and logos through to specific site security requirements such as 'MagLocks', Card Readers and 'Auto-close' mechanisms.

Features:

- Customisation to suit a particular customer's site requirements and corporate identity (e.g. corporate colour and logo),
- Below floor security grills,
- Low air resistance to ensure correct operation of CRAC units,
- Auto-close mechanisms,
- Security doors with key and 'Maglocks',
- Delivered as a kit configured for a specific installation to allow rapid installation,
- Either supplied directly from our UK factory for installation by third parties or can be designed, manufactured and installed on a 'turn-key' basis.
