

Overhead Cable Management

Rainford Solutions have produced a range of modular overhead cable management products capable of managing power, fibre and copper infrastructure cabling within a telecommunications environment. The

fully modular system provides a range of cabinet support modules and AC power distribution and aisle lighting solutions to work within data centres and telecom equipment rooms.

The overhead cable management system consists of a range of modular kits which contain a number of innovative features to allow quick and easy installation on site, therefore reducing installation costs. The modular kits can be configured to meet the requirements of a specific site.

The range includes:

- 1 to 4 bay modules
- Transverse cable runways to link between bays
- Modular aisle lighting kits
- AC/DC Power cable trunking
- Linear cable runways for cable routing between rooms.
